

Create Three Illusions

Optical illusions are drawings that trick your eyes when you look at them. Try drawing the illusions below.

You Need

- Blank paper
- Colored pencils or markers

Seeing Double

A Rubin's vase is an illusion in which a person can see a vase, two faces, or both. Can you draw your own Rubin's vase, so the vase's sides are also the profile of two faces, as in the example above?

Word Art

You've probably written a story before, but have you ever written a drawing? Using only words, see what images you can create.

Colorful Squiggles

1. Draw a squiggly line on a piece of paper.
2. Draw eight dots along the line.
3. Fill the page with lines that jump from dot to dot.
4. Color the design any way you want. You can also use shading to create depth (see page 110).
